US-09-815-242-6133

Sequence 6133, Application US/09815242

Patent No. US20020061569A1

GEMERAL INFORWATION:

APPLICANT: Haselbeck, Robert

APPLICANT: Ohlsen, Karii L.

APPLICANT: Zyskind, Judith W.

APPLICANT: Trawick, John D.

APPLICANT: Yamamoto, Robert T.

APPLICANT: Xu, H. Howard

TITLE OF INVENTION: Identification of Essential Genes

TITLE OF INVENTION: Prokaryotes

FILE REFERENCE: ELITRA.011A

CURRENT APPLICATION NUMBER: 00/191,078

PRIOR APPLICATION NUMBER: 60/206,848

PRIOR APPLICATION NUMBER: 60/206,848

iction was based on a Hidden Markov Model of TB genes and in TBparse (Krogh) supplemented with visual inspection mul base preference in codons, especially where there is sent the observed/expected third position G + C.
In some cases we may not have predicted the correct rocdon. Where possible we choose an initiation codon or ttg) which is preceded by an upstream ribosome it sequence (optimally 5-13bp before the initiation if this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1-JUN-1998) Submitted on behalf of the Mycobacterium sequencing and mapping teams, Sanger Centre, Wellcome Campus, Hinxton, Cambridge CB10 15A Unite de Genetique acterienne, Institut Pasteur, 28 rue du Docteur Roux, 26 edex 15, France E-mail: parkhill@sanger.ac.uk 1988 this sequence version replaced gi:1314009.
